Editorial Policy. MATERIALS PHYSICS AND MECHANICS is an international peer reviewed journal which specializes in the rapid publication of international conference proceedings and topical issues in every area of materials physics and mechanics. This permits such proceedings and topical issues to be conveniently referenced, abstracted and read. All contributions are edited by the corresponding guest editor(s) and they may not be published elsewhere. The journal will cover research activities in physics and mechanics of the traditional as well as the newly emerging materials.

CONTENTS

Preface ............................................................................................................................................... A4

Heteroepitaxy of Gallium Nitride Layers: the Role of Initial Stages in Film Formation .......... 1
V.N. Bessolov, S.A. Kukushkin, A.V. Osipov and A.V. Luk'yanov

Nucleation Theory and Small System Thermodynamics ............................................................. 13
B. J. Mokross

Kinetic and Thermodynamic Theories of Nucleation ................................................................. 21
Jürn W. P. Schmelzer

Finite Size Effects on Surface Excess Quantities: Application to .............................................. 34

Crystal Growth and Surface Melting of Epitaxial Layers
P. Müller

Determination of Time Characteristics of Solidification of............................................................ 43

Supercooled Halide Melt From Measurements of Its Electrical Conductivity
P. Demo, A. M. Sveshnikov, K. Nitsch, M. Rodová and Z. Kožišek

Semigrand Canonical Monte Carlo Simulation with Gibbs-Duhem ............................................ 49

Integration Technique for Alloy Phase Diagrams
Atsushi Mori, Brian B. Laird, Yoshihiro Kangawa, Tomonori Ito and Akinori Koukitu

"Soliton Heteroepitaxy" in the Formation of Epitaxial Films of II - VI ......................................... 58

Compounds Under Highly Nonequilibrium Conditions
A.P.Belyaev, V.P.Rubets and I.P.Kalinkin

Multilayer Model of Solid-Liquid Interface: Metastability Limits .................................................. 63

and Non-Equilibrium Characteristics
Igor L. Maksimov, Futoshi Shirazawa and Atsushi Mori

Failure Time of Elastic Materials Submitted to a Constant Load .................................................. 67
R.Scorretti, S. Santucci, A. Guarino, L. Vanel and S. Ciliberto

Highly Non-Linear Theory of Bifurcation Transformations of ..................................................... 71

Crystalline Lattice Structures
E.L. Aero

New Journal “Reviews On Advanced Materials Science” .............................................................. A5

MRS Fall 2003 Symposium Q “Mechanical Properties of.......................................................... A6
Nanostructured Materials and Nanocomposites” Call for Papers

Copyright Transfer Form ................................................................................................................. A7
